ASSESSMENT TOOL 3 – DEBUGGING & OPTIMISATION TASK

Course Code:	CSA06	Course Title:	Design and Analysis of Algorithms
CO Assessed:	CO2 – Manipulation (BL1, BL2, BL3)	Assessment:	Assessment Tool 3 – Debugging & Optimisation Task
Weightage:	10% of CIA	Total Marks:	100
CO2 Statement:	<i>Apply Brute Force technique to solve sorting, searching, Closest-Pair and Convex-Hull problems (BL1, BL2, BL3)</i>		
Student Name:	RAJESH KUMAR V	Reg. No.:	192511389
Section / Batch:		Date:	

Instructions to Students

- Answer the following question. Total Marks: 100.
- Carefully analyze the given program/code segment before identifying errors.
- Clearly identify logical, syntactical, and performance-related issues in the code.
- Apply systematic debugging techniques to correct the errors effectively.
- Optimize the given solution by improving efficiency, reducing unnecessary computations, or enhancing time complexity wherever possible.
- Provide proper justification for all corrections and optimization decisions.
- Write clean, structured, and well-documented code with appropriate comments.
- Maintain clarity, logical reasoning, and technical accuracy throughout the solution.

Question Type	Focus Area	Questions
Debugging & Optimisation Task	Identify errors, debug programs, and optimize algorithm efficiency using appropriate techniques	Q1

SECTION A – DEBUGGING & OPTIMISATION TASK

Code of Conduct

/ RAJESH KUMAR V / 192511389 (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: _____

SECTION A – Debugging & Optimisation Task (Answers)

Q1. Identify errors, debug the given programs, and optimize algorithm efficiency using appropriate techniques. The issue, corrected code, and complexity analysis for each part are given below.

Q69 – Debugging Maximum–Minimum Finder

Issue

The loop starts from index 0 even though mn and mx are already initialized with arr[0]. This causes an unnecessary comparison and fails to handle an empty list.

Correct Code

```
def min_max(arr):
    if not arr:
        return None

    mn = arr[0]
    mx = arr[0]

    for i in range(1, len(arr)):
        if arr[i] < mn:
            mn = arr[i]
        if arr[i] > mx:
            mx = arr[i]

    return mn, mx
```

Complexity Analysis

Time Complexity: O(n)

Space Complexity: O(1)

Q88 – Debugging Pair Sum Code

Issue

The outer loop stops too early using range(len(arr)-2), so the last valid outer index is skipped.

Correct Code

```
def pair_sum(arr, target):
    for i in range(len(arr) - 1):
        for j in range(i + 1, len(arr)):
            if arr[i] + arr[j] == target:
                return (i, j)
    return None
```

Complexity Analysis

Time Complexity: O(n²)

Space Complexity: O(1)

Reference: Handwritten / Source Solution (Q69 & Q88)

Solutions for Q69 and Q88

Q69 – Debugging Maximum–Minimum Finder

Issue:

The loop starts from index 0 even though mn and mx are already initialized with arr[0]. This causes an unnecessary comparison and fails to handle an empty list.

Correct Code:

```
def min_max(arr):
    if not arr:
        return None

    mn = arr[0]
    mx = arr[0]

    for i in range(1, len(arr)):
        if arr[i] < mn:
            mn = arr[i]
        if arr[i] > mx:
            mx = arr[i]

    return mn, mx
```

Time Complexity: $O(n)$

Space Complexity: $O(1)$

Q88 – Debugging Pair Sum Code

Issue:

The outer loop stops too early using range(len(arr)-2), so the last valid outer index is skipped.

Correct Code:

```
def pair_sum(arr, target):
    for i in range(len(arr) - 1):
        for j in range(i + 1, len(arr)):
            if arr[i] + arr[j] == target:
                return (i, j)
    return None
```

Time Complexity: $O(n^2)$

Space Complexity: $O(1)$

RUBRICS FOR CALCULATION

Criteria	Wt.	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
Problem Identification	20%	Accurately identifies all errors and root causes with clear understanding	Identifies most errors with minor gaps	Identifies some errors but misses key issues	Unable to identify errors correctly
Debugging	25%	Applies systematic debugging techniques effectively to resolve issues	Uses appropriate debugging methods with minor errors	Limited debugging approach; requires guidance	Unable to debug or resolve issues
Optimization	20%	Optimizes code by significantly improving time complexity using efficient algorithms	Improves time complexity with minor gaps in efficiency	Limited improvement in time complexity	No improvement; inefficient approach retained
Analysis	20%	Demonstrates strong logical reasoning and clear justification of solutions	Shows reasonable analysis with some justification	Limited analysis; weak reasoning	No analytical reasoning demonstrated
Code Quality	15%	Produces clean, well-structured code with proper comments and documentation	Code is mostly clear with minor documentation gaps	Code lacks structure and proper documentation	Poorly written code with no documentation

Marks Evaluation:

Criteria	Wt.	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
Problem Identification	20%				
Debugging	25%				
Optimization	20%				
Analysis	20%				
Code Quality	15%
